MILLSTAR.

Square Shoulder Milling Cutters Program

Millstar's latest development in square shoulder milling brings you a new generation of cost-efficient tools with unique capabilities. Our innovative geometry maintains a constant rake angle on all edges to ensure a smooth cut that requires less cutting force. The precise 90° angle of our cutters combines with a wiper effect to produce an unprecedented surface quality. Millstar's square shoulder cutters also feature a high-strength body to withstand extreme temperatures, and an improved corrosion-resistant surface for longer tool life.

Insert Geometry

Code		Description
S		The S geometry was designed for milling high alloyed steels. It provides a strong edge for best results even in hard machining applications.
C		With its very strong cutting edge, C geometry is the first choice for machining cast iron.
E	*Coming Soon*	The E geometry is the best choice for machining stainless steels. It has a sharp edge which is also well-suited to steel finishing applications.

Grades Description

Code		Description
MPP30H		This is a special, improved, multi-layer PVD coating, approaching the hardness of CBN on a tough substrate. This extremely wear-resistant coated grade is recommended for very hard metal milling applications. Because it can withstand high cutting temperatures, it is also appropriate for high speed milling under dry conditions and for higher alloy steels with hardness over 40HRC. Other recommended applications include machining of stainless steels, PH, nickel and chrome based alloys, nodular and grey cast iron.
MCP3005		With a tough substrate and a new CVD coating, this grade is extremely wear-resistant when machining alloyed steels and cast iron. It is also suitable for high-speed milling of alloyed steels under 40HRC, and for interrupted cutting applications.
MPP3005		This grade features special, improved Al TiN approaching the hardness of CBN on a very tough substrate. It is recommended for hard metal machining applications, especially for roughing operations. MPP3005 also allows high-speed and dry milling on tool, die and higher alloy steels with hardness over 40HRC. It is suitable for machining stainless steels, nickel and chrome based alloys, nodular and grey cast iron.
MCK1550		This grade was specially developed for cast iron milling applications. It has a high hardness substrate and an improved Aluminum Oxide CVD coating which allows usage either with or without coolant.

LIMITED WARRANTY

Millstar Warrants to all distributors and industrial users that the products supplied by Millstar shall be free from defects in material and workmanship.

For a period of thirty days from the date of sale, Millstar will repair or replace (at no additional cost to the customer) any standard Millstar product which Millstar determines contains defects in material or workmanship. Alternately, at its sole discretion, Millstar may credit all or part of the purchase price for such product. However, complete operating conditions and any other information requested by Millstar must accompany claims made under this Warranty. Millstar cannot issue credit or accept returns on special items.

EXCLUSION OF OTHER WARRANTIES AND REMEDIES

There are no warranties, express or implied, which extend beyond the warranty description on the face hereof and specifically, MILLSTAR AND ITS AFFILIATED COMPANIES EXCLUDE ANY IMPLIED WARRANTY OF MERCHANTABILITY OR FITNESS FOR A PARTICULAR USE. Millstar and its affiliated companies shall have no liability or responsibility for any claim or loss arising out of design, manufacture, sale or use of its products other than to repair or replace its products as described above. IN NO EVENT SHALL MILLSTAR OR ITS AFFILIATED COMPANIES BE LIABLE FOR ANY SPECIAL, CONSEQUENTIAL OR INCIDENTAL DAMAGES.

Any misuse or alteration of the product will void this Warranty.

Millstar does not authorize any person or entity to make any representation (verbal or written) contrary to the terms of this Limited Warranty or its exclusions.
